

# ATNX Rebrand — CMYK Color System + Dark/Light Mode

## Overview

Restyle the entire ATNX application (web app + Chrome extension) from the current green-on-black terminal aesthetic to a distinctive CMYK color system. Add a dark/light mode toggle. This is a visual overhaul only — no functionality changes.

The CMYK palette is intentionally distinctive from the typical crypto aesthetic (green terminal, blue DeFi gradients). It gives ATNX its own identity.

## Color System

### Core Palette

|          |         |                                                     |
|----------|---------|-----------------------------------------------------|
| CYAN:    | #00D4FF | – Data, charts, information, neutral UI elements    |
| MAGENTA: | #FF00E5 | – Actions, capture, extension, interactive elements |
| YELLOW:  | #FFE500 | – Scores, alerts, financial numbers, highlights     |
| BLACK:   | #000000 | – Dark mode background base                         |
| WHITE:   | #FFFFFF | – Light mode background base                        |

### Extended Palette — Dark Mode

|                 |                         |                                   |
|-----------------|-------------------------|-----------------------------------|
| Background:     |                         |                                   |
| bg-primary:     | #0A0A0A                 | – Main background (near black)    |
| bg-surface:     | #141414                 | – Card/container backgrounds      |
| bg-elevated:    | #1E1E1E                 | – Modals, dropdowns, hover states |
| bg-border:      | #2A2A2A                 | – Borders, dividers               |
| Text:           |                         |                                   |
| text-primary:   | #F0F0F0                 | – Main text                       |
| text-secondary: | #999999                 | – Muted/secondary text            |
| text-tertiary:  | #666666                 | – Subtle labels, timestamps       |
| Accents:        |                         |                                   |
| cyan:           | #00D4FF                 | – Primary accent                  |
| cyan-dim:       | #00A3CC                 | – Hover/pressed states            |
| cyan-glow:      | rgba(0, 212, 255, 0.15) | – Subtle glow/background tint     |
| magenta:        | #FF00E5                 | – Action accent                   |
| magenta-dim:    | #CC00B8                 | – Hover/pressed states            |
| magenta-glow:   | rgba(255, 0, 229, 0.15) | – Subtle glow/background tint     |

```
yellow:          #FFE500    - Score/financial accent
yellow-dim:      #CCB800    - Hover/pressed states
yellow-glow:     rgba(255, 229, 0, 0.15) - Subtle glow/background tint
```

## Extended Palette — Light Mode

### Background:

```
bg-primary:      #FAFAFA    - Main background
bg-surface:      #FFFFFF    - Card/container backgrounds
bg-elevated:     #F0F0F0    - Modals, dropdowns, hover states
bg-border:       #E0E0E0    - Borders, dividers
```

### Text:

```
text-primary:    #0A0A0A    - Main text
text-secondary:  #555555    - Muted/secondary text
text-tertiary:   #888888    - Subtle labels, timestamps
```

### Accents (slightly darker for readability on light backgrounds):

```
cyan:           #00B8DB    - Primary accent
cyan-dim:        #009BB8    - Hover/pressed states
cyan-glow:       rgba(0, 184, 219, 0.10) - Subtle background tint
magenta:         #D900C5    - Action accent
magenta-dim:     #B300A1    - Hover/pressed states
magenta-glow:    rgba(217, 0, 197, 0.10) - Subtle background tint
yellow:          #D4BE00    - Score/financial accent (darkened for contrast)
yellow-dim:      #A89600    - Hover/pressed states
yellow-glow:     rgba(212, 190, 0, 0.10) - Subtle background tint
```

## Tailwind Configuration

### tailwind.config.js

Replace the existing ATNX color configuration entirely:

```
javascript
```

```
module.exports = {
  darkMode: 'class', // Use class-based dark mode
  theme: {
    extend: {
      colors: {
        'atnx': {
          'cyan': '#00D4FF',
          'cyan-dim': '#00A3CC',
          'magenta': '#FF00E5',
          'magenta-dim': '#CC00B8',
          'yellow': '#FFE500',
          'yellow-dim': '#CCB800',
        },
        // Dark mode backgrounds
        'dark': {
          'primary': '#0A0A0A',
          'surface': '#141414',
          'elevated': '#1E1E1E',
          'border': '#2A2A2A',
        },
        // Light mode backgrounds
        'light': {
          'primary': '#FAFAFA',
          'surface': '#FFFFFF',
          'elevated': '#F0F0F0',
          'border': '#E0E0E0',
        },
      },
    },
    fontFamily: {
      'mono': ['JetBrains Mono', 'Fira Code', 'Consolas', 'monospace'],
      'sans': ['Inter', 'system-ui', 'sans-serif'],
    },
    boxShadow: {
      'cyan-glow': '0 0 20px rgba(0, 212, 255, 0.15)',
      'magenta-glow': '0 0 20px rgba(255, 0, 229, 0.15)',
      'yellow-glow': '0 0 20px rgba(255, 229, 0, 0.15)',
    },
  },
}
```

## Color Semantics — What Each Color Means

This is the most important section. Colors encode meaning across the entire app:

### Cyan — Information & Data

Use for:

- Chart lines (sparklines, trend charts)
- Data labels and values (PEAK, NOW values)
- Category badges
- Platform tags (YouTube, Twitter, etc.)
- Navigation links (active state)
- Informational text and descriptions
- Card borders (default state)
- Dashboard header text ("ATNX", "Attention Exchange")

### Magenta — Action & Interaction

Use for:

- "Trade This" button
- Extension capture overlay (selection rectangle)
- Extension popup accent color
- Interactive hover states on cards
- "Open Position" submit button border/accent
- Active selection states
- The capture count badge
- Extension icon tint
- Sort button active state

### Yellow — Financial & Scores

Use for:

- Virality score numbers (the big 585, 426, etc.)
- PnL numbers (both profit and loss — use yellow for neutral, then green tint for profit, red tint for loss)
- Trend indicators (SPIKING, RISING, FALLING, STABLE, NEW)

- Price/index values in the trade modal
- Portfolio balance
- Fee displays
- Alert/notification accents
- Score badge backgrounds (subtle yellow glow)

## Profit/Loss Override

When showing PnL specifically:

- **Profit:** Yellow remains but add a cyan tint — or use a bright cyan-yellow gradient text
- **Loss:** Use magenta for losses instead of traditional red — keeps it on brand
- This way even financial states stay within the CMYK system

Alternative (simpler): Keep yellow for all financial numbers. Use a subtle ▲ or ▼ icon in cyan (profit) or magenta (loss) next to the yellow number. The color of the arrow tells you direction, the yellow number tells you magnitude.

---

## Dark/Light Mode Toggle

### Implementation

Use a class-based approach with `next-themes` or a simple React context:

```
bash
npm install next-themes
```

### Theme Provider — `app/layout.tsx`

```
tsx
```

```
import { ThemeProvider } from 'next-themes';

export default function RootLayout({ children }) {
  return (
    <html lang="en" suppressHydrationWarning>
      <body>
        <ThemeProvider attribute="class" defaultTheme="dark">
          {children}
        </ThemeProvider>
      </body>
    </html>
  );
}
```

## Toggle Button

Place in the dashboard header, right side:

ATNX

Attention Exchange

[☀/🌙] [4] Captures

The toggle button:

- Dark mode: show a sun icon (☀) — clicking switches to light
- Light mode: show a moon icon (🌙) — clicking switches to dark
- Smooth transition on the background and text colors (use CSS transition on background-color and color, ~200ms)

tsx

```
// components/ThemeToggle.tsx

'use client';

import { useTheme } from 'next-themes';

export function ThemeToggle() {
  const { theme, setTheme } = useTheme();

  return (
    <button
      onClick={() => setTheme(theme === 'dark' ? 'light' : 'dark')}
      className="p-2 rounded-lg border border-dark-border dark:border-dark-border
        hover:border-atnx-cyan transition-colors"
    >
      {/* Sun icon for dark mode (click to go light), Moon for light mode */}
    </button>
  );
}
```

## CSS Class Pattern

For every styled element, use the Tailwind dark: prefix pattern:

```
tsx

// Example card
<div className="bg-light-surface dark:bg-dark-surface
  border border-light-border dark:border-dark-border
  text-light-primary dark:text-dark-primary">
```

Keep **dark** as the default theme since crypto users overwhelmingly prefer dark mode.

## Component-by-Component Restyle Guide

### Dashboard Header

Dark: bg-dark-primary, "ATNX" in cyan, "Attention Exchange" in text-secondary  
 Light: bg-light-primary, "ATNX" in cyan (darker variant), same text hierarchy

Capture count badge: magenta border, magenta text

Sort buttons: cyan when active, text-secondary when inactive, magenta hover  
Theme toggle: right-aligned in header

## Capture Cards

Dark: bg-dark-surface, border-dark-border

Light: bg-light-surface, border-light-border

Hover state: border changes to cyan (subtle glow optional)

Type badge ("MEME", "PERSON", "TREND"):

- bg: cyan-glow background, cyan text, cyan border

Name: cyan text, bold

Virality score box:

- yellow text, large monospace
- bg: yellow-glow background
- border: subtle yellow border

Trend indicator:

- yellow text for SPIKING, RISING
- text-secondary for STABLE
- magenta for FALLING

Sparkline chart line: cyan stroke

Category label: text-secondary

Sentiment label: cyan for positive, magenta for negative, yellow for mixed, text-secondary for neutral

PEAK/NOW values: text-secondary labels, cyan values

Description quote: text-primary, italic

Source/timestamp: text-tertiary

"Detected metrics" / "Raw text" expand toggles: cyan text

"Trade This" button:

- magenta border, magenta text, transparent bg
- hover: magenta bg, black/white text

## Trade Modal

Backdrop: `rgba(0,0,0,0.7)` dark, `rgba(0,0,0,0.5)` light – with `backdrop-blur`

Modal container:

Dark: `bg-dark-elevated`, `border-dark-border`

Light: `bg-light-elevated`, `border-light-border`

Title: cyan text

Current index value: yellow, large monospace

Chart inside modal: cyan line, larger version of sparkline

LONG button: cyan border/text, when selected: cyan bg with black text

SHORT button: magenta border/text, when selected: magenta bg with black text

Amount input:

Dark: `bg-dark-surface`, `border-dark-border`, `text-primary`

Light: `bg-light-surface`, `border-light-border`, `text-primary`

Focus: `border-cyan`

Quick amount buttons: `border-dark-border`, `text-secondary`, hover: `border-cyan`

Fee display: `text-tertiary` label, yellow value

Entry index: `text-tertiary` label, yellow value

Submit button (LONG): cyan bg, black text, full width

Submit button (SHORT): magenta bg, black text, full width

## Portfolio Page

Balance: yellow text, large

Open Positions count: `text-secondary`

Total PnL: yellow number, cyan ▲ for profit / magenta ▼ for loss

Position cards:

- Same card style as capture cards (`bg-surface`, `border`)

- LONG indicator: cyan dot/badge

- SHORT indicator: magenta dot/badge

- Entry/Current/Change labels: `text-tertiary`

- Entry/Current values: cyan

- Change percent: yellow with direction arrow (cyan ▲ / magenta ▼)

- Size: `text-secondary`

- PnL amount: yellow

- Value: text-primary

Close Position button: magenta border, magenta text, hover: magenta bg

Chart with entry marker:

- Line: cyan
- Entry point dot: magenta for the marker
- Entry reference line: magenta dashed

## Confirmation Toast

Container: bg-dark-elevated (dark) / bg-light-elevated (light)

Border: cyan for long positions, magenta for short positions

Icon:  or checkmark in cyan

Text: text-primary

Position details: cyan for name, yellow for index value

## Profit/Loss Close Screen

Profitable close:

- Border: cyan
- Profit number: yellow
- Direction arrows: cyan
- Progress bar fill: cyan

Loss close:

- Border: magenta
- Loss number: yellow
- Direction arrows: magenta
- Progress bar fill: magenta

## Live Mode Toggle

Inactive: text-secondary, border-dark-border

Active: magenta text, magenta border, subtle magenta-glow pulse animation

Label: "► LIVE" in magenta when active

---

## Chrome Extension Restyle

### Selection Overlay (content.css)

The selection rectangle is the signature ATNX interaction — make it magenta:

CSS

```
.atnx-overlay {
  position: fixed;
  top: 0;
  left: 0;
  width: 100vw;
  height: 100vh;
  z-index: 2147483647;
  cursor: crosshair;
  background: rgba(0, 0, 0, 0.15);
}

.atnx-selection {
  position: fixed;
  border: 2px solid #FF00E5;
  background: rgba(255, 0, 229, 0.08);
  box-shadow: 0 0 20px rgba(255, 0, 229, 0.2),
              inset 0 0 20px rgba(255, 0, 229, 0.05);
  z-index: 2147483647;
  pointer-events: none;
}

.atnx-tooltip {
  position: fixed;
  background: #0A0A0A;
  color: #FF00E5;
  border: 1px solid #FF00E5;
  padding: 4px 10px;
  border-radius: 4px;
  font-family: 'JetBrains Mono', monospace;
  font-size: 12px;
  z-index: 2147483647;
  pointer-events: none;
  box-shadow: 0 0 10px rgba(255, 0, 229, 0.2);
}

/* Optional: animated corner markers on the selection */
.atnx-selection::before,
.atnx-selection::after {
  content: '';
  position: absolute;
  width: 12px;
  height: 12px;
  border-color: #FF00E5;
```

```
border-style: solid;
}
.atnx-selection::before {
  top: -1px;
  left: -1px;
  border-width: 2px 0 0 2px;
}
.atnx-selection::after {
  bottom: -1px;
  right: -1px;
  border-width: 0 2px 2px 0;
}
```

## Extension Popup (popup.html / popup.css)

Background: #0A0A0A  
"ATNX" title: cyan  
"Capture" button: magenta bg, black text  
API key input: dark surface bg, cyan focus border  
Status text: text-secondary, magenta when capturing, cyan when done  
"Open Dashboard" link: cyan text, underline on hover

The popup should feel like a mini version of the web app — same CMYK language.

## Extension Icon

If generating new icons, use a simple mark:

- Black background
- Magenta crosshair/capture symbol
- Or a simple "A" in magenta

For now, keeping existing icons is fine. The extension popup and overlay do the branding work.

---

## Typography

Keep monospace as the primary font for the terminal/exchange feel, but introduce a sans-serif for longer text:

Headings, scores, labels, code-like content: JetBrains Mono (monospace)  
Descriptions, paragraphs, long text: Inter (sans-serif)

Both are available from Google Fonts. Add to the app layout:

```
html
```

```
<link href="https://fonts.googleapis.com/css2?family=JetBrains+Mono:wght@400;600;700"
```

## Transitions & Polish

Add smooth transitions for the theme toggle and interactive elements:

```
css
```

```
/* Global transition for theme switching */
* {
  transition: background-color 200ms ease,
             border-color 200ms ease,
             color 200ms ease;
}

/* Disable transitions on page load to prevent flash */
.no-transitions * {
  transition: none !important;
}
```

For the live mode, add a subtle pulse animation on the "LIVE" indicator:

```
css
```

```
@keyframes live-pulse {
  0%, 100% { opacity: 1; }
  50% { opacity: 0.5; }
}

.live-indicator {
  animation: live-pulse 2s ease-in-out infinite;
}
```

## Implementation Priority

1. **Tailwind config update** — new color system

2. **Theme provider + toggle** — next-themes setup
  3. **Global styles** — backgrounds, text colors, transitions
  4. **Dashboard header** — restyle with CMYK
  5. **Capture cards** — full restyle (biggest visual impact)
  6. **Trade modal** — restyle
  7. **Portfolio page** — restyle
  8. **Extension overlay** — magenta selection rectangle
  9. **Extension popup** — restyle
  10. **Polish** — glow effects, hover states, animations
- 

## Important Notes

- **Dark mode is the default.** Most crypto/trading users prefer dark. Light mode is a nice-to-have for differentiation and accessibility.
  - **Don't change any functionality.** This is purely visual. All existing features from Phase 1, 2, and demo layer should work exactly the same.
  - **Test both modes.** Every component must look good in both dark AND light mode. Check contrast ratios — yellow on white can be hard to read, hence the darkened yellow variants for light mode.
  - **The CMYK colors are intentionally vivid.** They should pop. Don't mute them too much. The boldness is the brand.
  - **Remove ALL traces of the old green (#00FF66) color.** Search the entire codebase for any hex codes, Tailwind classes, or inline styles referencing the old palette and replace them.
- 

## Success Criteria

The restyle is done when:

1. ☒ All old green-on-black styling is completely replaced
2. ☒ Cyan is used consistently for data/information elements
3. ☒ Magenta is used consistently for action/interaction elements
4. ☒ Yellow is used consistently for scores/financial elements
5. ☒ Dark/light mode toggle works and is accessible from the header
6. ☒ Dark mode is the default

7. ☒ Both modes have proper contrast and readability
8. ☒ Extension selection overlay is magenta
9. ☒ Extension popup matches the CMYK brand
10. ☒ Transitions between themes are smooth (no flash)
11. ☒ The app looks visually distinct from pump.fun, Polymarket, and typical crypto UIs
